Abstracts

Dock Shelters are enclosures that seal the perimeter of the trailer to form a seal. This is accomplished by applying pressure against the sides of the trailer with fabric curtains fitted with fiberglass stays. They fit larger dock door openings and service a wide variety of trailer heights and styles while being subjected to less damage from daily wear and tear since they aren't designed to be compressed into by the trailer. They also allow for full, unobstructed access to loads on the trailer for maximum loading and unloading efficiency.

Dock Seals are foam pads that the trailer compresses into when it backs in and comes to rest against the dock bumpers, forming a seal around three sides of the trailer. Generally, dock seals provide a tight seal for a relatively low price, but they can become worn easily at loading docks that receive heavy traffic. Dock seals are best used when there is a minor variation in the size and style of trailers being served.

This report elaborates the market size, market characteristics, and market growth of the Dock Seals and Shelters industry, and breaks down according to the type, application, and consumption area of Dock Seals and Shelters. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dock Seals and Shelters in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
