## Abstracts

A dry bulk cargo barge is a barge designed to carry freight such as coal, finished steel or its ingredients, grain, sand or gravel, or similar materials. Barges are usually constructed of steel. They have an outer hull, an internal void that is fitted with heavy struts and cross braces or scantlings, and an internal cargo box. The outer hull of a barge can come in one of two configurations. A rake barge has a curved bow to provide less resistance when being pushed and is usually placed at the head of the tow. A box barge is usually placed in the center and rear of the tow and can hold more cargo. This report elaborates the market size, market characteristics, and market growth of the Dry Bulk Shipping industry, and breaks down according to the type, application, and consumption area of Dry Bulk Shipping. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
