Abstracts

Dry ice blasting is a clean form in which dry ice particles are pushed to the contaminated surface at very high speeds. This is similar to sand blasting, plastic bead blasting or soda blasting. The difference is that dry ice blasting does not produce secondary waste or chemical residues and is non-abrasive, non-conductive, non-flammable and non-toxic. It reduces or eliminates the risk of employees coming into contact with chemicals and is an environmentally friendly cleaning method.

This report elaborates the market size, market characteristics, and market growth of the Dry Ice Cleaning industry, and breaks down according to the type, application, and consumption area of Dry Ice Cleaning. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dry Ice Cleaning in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
