A dry powder inhaler (DPI) is a device which delivers medication to the lungs of patients suffering from respiratory disorders in the form of a dry powder. Dry powder inhaler is used to treat respiratory diseases such as asthma, bronchitis, emphysema, etc. DPI are better alternatives to conventional inhalers such as metered-dose inhalers. The dry powder inhaler is breath-activated, where the drug or medicine is released to the lungs only after taking a fast-deep breath through the inhaler.
