Abstracts

A DSL modem is a kind of modem that lets users connect to the Internet using a Digital Subscriber Line (DSL) connection. Though DSL is orders of magnitude faster than dial-up service, it's actually one of the slower technologies currently available for online access. DSL offers a significant speed increase in Internet performance when compared to a dial-up connection although is not as fast as most Cable broadband connections.

This report elaborates the market size, market characteristics, and market growth of the DSL Modem industry, and breaks down according to the type, application, and consumption area of DSL Modem. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for DSL Modem in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
