## **Abstracts**

DSL is the global term for a family of technologies that transforms the copper local loop into a broadband line capable of delivering multiple video channels into the home.

G.fast is a digital subscriber line (DSL) protocol standard for local loops shorter than 500 m, with performance targets between 100 Mbit/s and 1 Gbit/s, depending on loop length.

This report elaborates the market size, market characteristics, and market growth of the DSL and G-fast Chips industry, and breaks down according to the type, application, and consumption area of DSL and G-fast Chips. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
