Abstracts

Digital signal processing (DSP) is the use of digital processing, such as by computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The signals processed in this manner are a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency.

This report elaborates the market size, market characteristics, and market growth of the DSP Software industry, and breaks down according to the type, application, and consumption area of DSP Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
