Abstracts

A dye-sublimation printer is a computer printer which uses heat to transfer dye onto materials such as a plastic, card, paper, or fabric. The sublimation name was first applied because the dye was considered to make the transition between the solid and gas states without going through a liquid stage. This understanding of the process was later shown to be incorrect. There is some liquifying of the dye. Since then, the process is sometimes known as dye-diffusion, though this has not eliminated the original name.

This report elaborates the market size, market characteristics, and market growth of the Dye Sublimation Printers industry, and breaks down according to the type, application, and consumption area of Dye Sublimation Printers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dye Sublimation Printers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
