Abstracts

A Clinical Trial Management System (CTMS) is a software system used by biotechnology and pharmaceutical industries to manage clinical trials in clinical research. The system maintains and manages planning, performing and reporting functions, along with participant contact information, tracking deadlines and milestones. eClinical is a term used within the biopharmaceutical industry to refer to trial automation technology. Originally, 'eClinical' was used to refer to any involved technology. Without a more specific definition, the industry used 'eClinical' to name technologies such as electronic data capture, clinical trial management systems or Randomization and Trial Supply Management systems, commonly using Interactive voice response systems, electronic patient diaries and other applications.

More recently, the term evolved to encompass the entire 'business process' instead of individual technologies.[1] An example of an 'eClinical solution' is the combination of EDC and IVR systems where common data are shared in a way that eliminates the need for users to enter the same data or perform the same action in both applications. The shift in the definition of 'eClinical' has been a natural part of the industry's evolution to seek better ways to utilize multiple technologies together within a clinical trial. This report elaborates the market size, market characteristics, and market growth of the e-clinical Trials industry, and breaks down according to the type, application, and consumption area of e-clinical Trials. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for e-clinical Trials in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
