Abstracts

Earth observation satellites are designed for non-military purposes, such as monitoring and predicting climate models, assessing damage during natural disasters, estimating crop yields, surface geological mapping and mineral deposits, and availability of water sources. It uses remote sensing technology to collect chemical, physical and biological data from the Earth system at an altitude of 800 km. This method allows the use of high resolution cameras and advanced sensors to measure the geological parameters of the world from orbit. It promotes the management of the Earth's natural resources in a resource-rich manner.

This report elaborates the market size, market characteristics, and market growth of the Earth Observation Satellite industry, and breaks down according to the type, application, and consumption area of Earth Observation Satellite. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Earth Observation Satellite in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
