## Abstracts

Edge computing brings computer data storage closer to the location where it is needed. It is a distributed computing paradigm in which computation is largely or completely performed on distributed device nodes. Edge computing pushes applications, data and computing power (services) away from centralized points to locations closer to the user. This report elaborates the market size, market characteristics, and market growth of the Edge Computing industry, and breaks down according to the type, application, and consumption area of Edge Computing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Edge Computing in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
