Abstracts

Electric buses can store the electricity on board, or can be fed continuously from an external source. Buses storing electricity are majorly battery electric buses, in which the electric motor obtains energy from an on-board battery, although examples of other storage modes do exist, such as the gyrobus which uses flywheel energy storage.

This report elaborates the market size, market characteristics, and market growth of the Electric Buses industry, and breaks down according to the type, application, and consumption area of Electric Buses. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electric Buses in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
