Abstracts

Electric utility vehicle powertrains consist of a bank of deep-cycle batteries that provide the “fuel” to run a DC electric motor that drives a transaxle and propels the wheels. Deep-cycle batteries are different from the standard lead-acid battery used to start your car and are designed to provide a steady supply of current over a long period of time. Range before recharge can be a consideration if you cover a lot of ground. Unlike a gasoline vehicle that can be refueled in a few minutes, recharging an electric vehicle will take several hours.

This report elaborates the market size, market characteristics, and market growth of the Electric Utility Vehicles industry, and breaks down according to the type, application, and consumption area of Electric Utility Vehicles. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electric Utility Vehicles in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
