Abstracts

An electric violin is a violin equipped with an electronic output of its sound. The term most properly refers to an instrument intentionally made to be electrified with built-in pickups, usually with a solid body. It can also refer to a violin fitted with an electric pickup of some type, although 'amplified violin' or 'electro-acoustic violin' are more accurate in that case.

This report elaborates the market size, market characteristics, and market growth of the Electric Violin industry, and breaks down according to the type, application, and consumption area of Electric Violin. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electric Violin in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
