Abstracts

Electrical contacts are circuit components in electrical switches, relays, connectors and circuit breakers. Each contact is a piece of electrically conductive material, usually a metal. When a pair of contacts are in contact, they can pass a current with a certain contact resistance, depending on the surface structure, surface chemistry and contact time; when the pair is separated by an insulating gap, the pair does not pass current. When the contacts are in contact, the switch is 'closed'; when the contacts are separated, the switch is 'opened'.

This report elaborates the market size, market characteristics, and market growth of the Electrical Contacts industry, and breaks down according to the type, application, and consumption area of Electrical Contacts. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electrical Contacts in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
