## Abstracts

In electrical engineering, a disconnect, disconnect switch or isolator switch is used to ensure that an electrical circuit is completely de-energized for service or maintenance. Such switches are often found in electrical distribution and industrial applications, where machinery must have its source of driving power removed for adjustment or repair. High-voltage isolation switches are used in electrical substations to allow isolation of apparatus such as circuit breakers, transformers, and transmission lines, for maintenance. The disconnect is usually not intended for normal control of the circuit, but only for safety isolation. Disconnectors can be operated either manually or automatically.

This report elaborates the market size, market characteristics, and market growth of the Electrical Isolator Switches industry, and breaks down according to the type, application, and consumption area of Electrical Isolator Switches. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electrical Isolator Switches in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
