## Abstracts

Electrofusion is a method of joining MDPE, HDPE and other plastic pipes using special fittings that have built-in electric heating elements which are used to weld the joint together. The pipes to be joined are cleaned, inserted into the electrofusion fitting (with a temporary clamp if required) and a voltage (typically 40V) is applied for a fixed time depending on the fitting in use.

This report elaborates the market size, market characteristics, and market growth of the Electro-fusion Coupler industry, and breaks down according to the type, application, and consumption area of Electro-fusion Coupler. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electro-fusion Coupler in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
