Abstracts

Electron-beam resist is a kind of material film used to block electron beam on a surface. The electron beam changes the solubility of the resist, enabling selective removal of either the exposed or non-exposed regions of the resist by immersing it in a solvent. This report elaborates the market size, market characteristics, and market growth of the Electron Beam Resist industry, and breaks down according to the type, application, and consumption area of Electron Beam Resist. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electron Beam Resist in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
