Abstracts

It is a system to protect merchandise by attaching electronically detectable tags to products and alert retailers when shoplifters attempt to take items through electronic gate sensors at exit doors at the stores. This system includes an electronic antenna, deactivator or detacher and an electronic tag.

The technology adapted by electronic article surveillance system detects an unbilled product or item lifted from the store and sounds an alarm when that particular product passes through the gates of retail stores. Electronic article surveillance systems help retailers for better merchandise management, better logistics control, better customer experience, enhancing profit margin, and enhancing operational processes in the store.

This report elaborates the market size, market characteristics, and market growth of the Electronic Article Surveillance (Eas) Systems industry, and breaks down according to the type, application, and consumption area of Electronic Article Surveillance (Eas) Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electronic Article Surveillance (Eas) Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
