Abstracts

Electronic waste or e-waste describes discarded electrical or electronic devices. Used electronics which are destined for reuse, resale, salvage, recycling, or disposal are also considered e-waste. Informal processing of e-waste in developing countries can lead to adverse human health effects and environmental pollution. Electronic recycling helps to recover precious metals by ensuring that toxic and hazardous substance are handled properly thereby minimizing the environmental impact associated with mining. Even though recycling of e-waste pose clear benefits, lack of recycling awareness and regulatory infrastructure have resulted to low recycling rate.

This report elaborates the market size, market characteristics, and market growth of the Electronic Recycling industry, and breaks down according to the type, application, and consumption area of Electronic Recycling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electronic Recycling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
