Abstracts

The electronic total station (TPS) is an electronic/optical instrument used in modern surveying and building construction. The total station is an electronic theodolite (transit) integrated with an electronic distance meter (EDM) to read slope distances from the instrument to a particular point. It is used to measuring distances, heights and angles to provide accurate position data.

This report elaborates the market size, market characteristics, and market growth of the Electronic Total Station industry, and breaks down according to the type, application, and consumption area of Electronic Total Station. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
