Abstracts

E-waste consists of unwanted or broken electronic or electrical devices, and peripherals such as smartphones, televisions, laptops, refrigerators, computers, printers and other electronic products. The ever-rising problem of e-waste is being solved with the use of electronic recycling. Most electronic products are made up of metals, which are recyclable. The dismantling and recycling of end-of-life electronic products promotes the conservation of undamaged natural resources. Moreover, electronic recycling helps in minimizing the air and water pollution that is common in the disposal and landfilling of e-waste. Electronic recycling consists of three main processes: collection, pre-processing, and end-processing.

This report elaborates the market size, market characteristics, and market growth of the Electronic Waste Recycling industry, and breaks down according to the type, application, and consumption area of Electronic Waste Recycling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electronic Waste Recycling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
