## Abstracts

An electrosurgical generator is a means of applying high frequency current to biological tissue as a means of cutting, coagulating, drying or organizing. Its benefits include the ability to perform precise cuts with limited blood loss. Electrosurgical devices are often used during surgery to help prevent blood loss in hospital operating rooms or outpatient procedures.

This report elaborates the market size, market characteristics, and market growth of the Electrosurgical Generator industry, and breaks down according to the type, application, and consumption area of Electrosurgical Generator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Electrosurgical Generator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
