Abstracts

A field-programmable gate array (FPGA) is an integrated circuit designed to be configured by a customer or a designer after manufacturing – hence the term 'field-programmable'. The FPGA configuration is generally specified using a hardware description language (HDL), similar to that used for an application-specific integrated circuit (ASIC).

This report elaborates the market size, market characteristics, and market growth of the Embedded Field-Programmable Gate Array (FPGA) industry, and breaks down according to the type, application, and consumption area of Embedded Field-Programmable Gate Array (FPGA). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Embedded Field-Programmable Gate Array (FPGA) in a special period.
