## **Abstracts**

An embedded operating system is an operating system for embedded computer systems. This type of operating system is typically designed to be resource-efficient and reliable. Resource efficiency comes at the cost of losing some functionality or granularity that larger computer operating systems provide, including functions which may not be used by the specialized applications they run. Depending on the method used for multitasking, this type of OS is frequently considered to be a real-time operating system, or RTOS.

This report elaborates the market size, market characteristics, and market growth of the Embedded Real-Time Operating Systems for the IoT industry, and breaks down according to the type, application, and consumption area of Embedded Real-Time Operating Systems for the IoT. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Embedded Real-Time Operating Systems for the IoT in a special period.
