Abstracts

CCD (Charged Coupled Device), CCDs are sensors used in digital cameras and video cameras to record still and moving images.

Electron-multiplying CCD (EMCCD) technology, is designed to beat down the intrinsic electronic noise of the readout process, which is comparable to a signal of a few photons per exposure. In this way, EMCCD cameras address the challenges of most low light imaging. They also support faster frame acquisition rates than their CCD counterparts, making them highly suitable for live imaging. Better still, EMCCD cameras can offer ultimate sensitivity for the observation of the darkest scenes by becoming wide-field real-time photon-counting imaging devices.

This report elaborates the market size, market characteristics, and market growth of the EMCCD & CCD Cameras industry, and breaks down according to the type, application, and consumption area of EMCCD & CCD Cameras. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for EMCCD & CCD Cameras in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
