Abstracts

Electromagnetic interference negatively impacts an electrical circuit due to direct interference from RF transmissions or electromagnetic induction. This interference may degrade, interrupt, obstruct, or otherwise limit the electronic circuit's performance. Interference may occur naturally or other electronic equipment may generate it. EMI can be generated purposely in order to jam radios or radars as a form of electronic warfare. This report elaborates the market size, market characteristics, and market growth of the EMI Shielding industry, and breaks down according to the type, application, and consumption area of EMI Shielding. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for EMI Shielding in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
