Abstracts

EMV — the acronym for Europay, Mastercard and Visa — is the global standard for cards equipped with computer chips and technologies for verifying chip card transactions.

An EMV card is simply a smart card (also known as a chip card or IC card) that is used to store and verify data on an integrated circuit. Unlike a magnetic stripe card, each time an EMV card is used for payment, the card chip creates a unique transaction code that cannot be used again. It includes credit cards, debit cards, prepaid cards, contactless cards, etc.

This report elaborates the market size, market characteristics, and market growth of the EMV Payment Card industry, and breaks down according to the type, application, and consumption area of EMV Payment Card. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
