Abstracts

Energy Cloud is an emerging concept acquired from cloud computing that challenges conventional hub-and-spoke grid architecture with a wide spectrum of regulatory, environmental, commercial, and technical changes. The constant broadening of smart grid infrastructure and stable rise in distributed energy resources (DER) capacity are expected to be the two critical trends propelling the shift to the transparent, responsive, and dynamic energy cloud landscape. Energy cloud evolution is considered as an unparalleled opportunity for vendors and customers alike to improve or replace their status quo.

This report elaborates the market size, market characteristics, and market growth of the Energy Cloud industry, and breaks down according to the type, application, and consumption area of Energy Cloud. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Energy Cloud in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
