Abstracts

Energy efficiency is a measure of how much of the available energy is put to use in a given project. Energy efficient buildings (new constructions or renovated existing buildings) can be defined as buildings that are designed to provide a significant reduction of the energy need for heating and cooling, independently of the energy and of the equipments that will be chosen to heat or cool the building.

This report elaborates the market size, market characteristics, and market growth of the Energy-Efficient Building industry, and breaks down according to the type, application, and consumption area of Energy-Efficient Building. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
