Abstracts

Energy storage battery for microgrids is an energy reservoir that can store electrical energy and supply energy when required. Such a battery system has the added advantage of matching generation to the time of use and enables peak-shaving applications. Battery-based energy storage is more environmentally-friendly than traditional diesel generators and significantly reduces the fuel and sizing needs for common backup generators. Even small amounts of energy storage can have a major impact on reducing fuel costs, maintenance and omissions of diesel or bio-diesel generators.
