Abstracts

Energy trading & risk management (ETRM) is a commercial decision making and market execution tool in an integrated system that enables data exchange among traders and retailers, generators, and operations, contract, and accounting functions. The ETRM system covers complex trading requirements of a liberalized energy market and helps market participants to trade in the full range of contracts across the globe. The ETRM system also entails comprehensive risk management strategies and policies, event and trade identification, and scheduling and settlement execution. It provides consulting services for market monitoring, price transparency, and regulatory compliance. ETRM systems can be implemented to manage the entire value chain of the energy business. These systems are installed to understand the real risks involved in the value chain and provide the best options to overcome these risks. Major global firms engaged in the energy business adopt ETRM solutions widely to maximize profitability and manage the risks in the best possible manner. This report elaborates the market size, market characteristics, and market growth of the Energy Trading and Risk Management (ETRM) industry, and breaks down according to the type, application, and consumption area of Energy Trading and Risk Management (ETRM). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
