## Abstracts

Engineered stone is a composite material made of crushed stone bound together by an adhesive, (most commonly polymer resin, with some newer versions using cement mix). This category includes engineered quartz, polymer concrete and engineered marble stone. The application of these products depends on the original stone used. For engineered marbles the most common application is indoor flooring and walls, while the quartz based product is used primarily for kitchen countertops as an alternative to laminate or granite.

This report elaborates the market size, market characteristics, and market growth of the Engineered Stone industry, and breaks down according to the type, application, and consumption area of Engineered Stone. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Engineered Stone in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
