Abstracts

A firewall is an important part of any network security system, whether it is based on hardware or software. It filters network traffic according to a set of rules to protect the network from malicious attacks. However, today's rapidly evolving threat environment requires organizations to go beyond traditional firewall models and revisit perimeter security architectures. Enterprises must consider these known and unknown security threats when choosing an enterprise network security platform.

This report elaborates the market size, market characteristics, and market growth of the Enterprise Firewall industry, and breaks down according to the type, application, and consumption area of Enterprise Firewall. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
