Abstracts

Enterprise Infrastructure VPN privatize data communications to achieve confidentiality for data being transferred across networks. VPNs are virtually private because access to the data is restricted to authorized portals and endpoints. Privacy can be achieved by Physical protection of communication lines, Strict control of the network elements, including firewalls and points of presence (POPs), and/or encryption added to data streams, with key controls maintained by the enterprise.
This report elaborates the market size, market characteristics, and market growth of the Enterprise Infrastructure VPN industry, and breaks down according to the type, application, and consumption area of Enterprise Infrastructure VPN.
