Abstracts

A type of Omega-3 fatty acids. The three types of omega-3 fatty acids involved in human physiology are α -linolenic acid (ALA), found in plant oils, and eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA), both commonly found in marine oils. Marine algae and phytoplankton are primary sources of omega-3 fatty acids.

Common sources of plant oils containing ALA include walnut, edible seeds, clary sage seed oil, algal oil, flaxseed oil, Sacha Inchi oil, Echium oil, and hemp oil, while sources of animal omega-3 fatty acids EPA and DHA include fish, fish oils, eggs from chickens fed EPA and DHA, squid oils, and krill oil. Dietary supplementation with omega-3 fatty acids does not appear to affect the risk of death, cancer or heart disease. Furthermore, fish oil supplement studies have failed to support claims of preventing heart attacks or strokes or any vascular disease outcomes.

This report elaborates the market size, market characteristics, and market growth of the EPA Focused Algae Omega-3 industry, and breaks down according to the type, application, and consumption area of EPA Focused Algae Omega-3. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
