Abstracts

Enterprise Resource Planning (ERP) is referred to business process management software that enables enterprises to use integrated application systems to manage business and automate certain product, technology and human resources related back office functions. ERP software combines all aspects of an organization into a single database, application, and user interface, including product development, manufacturing, product planning, sales, and marketing. It also provides a degree of structured monitoring and automation. Instead of requiring employees to keep different databases and spreadsheets that need to be combined manually to produce documents, ERP systems allow employees to extract reports from one process.

This report elaborates the market size, market characteristics, and market growth of the ERP Solutions industry, and breaks down according to the type, application, and consumption area of ERP Solutions. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for ERP Solutions in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
