Abstracts

An espresso maker brews coffee by forcing pressurized water near boiling point through a 'puck' of ground coffee and a filter in order to produce a thick, concentrated coffee called espresso. The first machine for making espresso was built and patented in 1884 by Angelo Moriondo of Turin, Italy. An improved design was patented on April 28, 1903, by Luigi Bezzera. The founder of the La Pavoni company bought the patent and from 1905 produced espresso machines commercially on a small scale in Milan. Multiple machine designs have been created to produce espresso. Several machines share some common elements, such as a grouphead and a portafilter. An espresso machine may also have a steam wand which is used to steam and froth liquids (such as milk) for coffee drinks such as cappuccino and caffe latte.

Espresso makers may be steam-driven, piston-driven, pump-driven, or air-pump-driven. Machines may also be manual or automatic.

This report elaborates the market size, market characteristics, and market growth of the Espresso Coffee Makers industry, and breaks down according to the type, application, and consumption area of Espresso Coffee Makers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Espresso Coffee Makers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
