Abstracts

An evaporative cooler is a device that cools air by evaporation of water. Evaporative cooling differs from typical air conditioning systems in that it uses a vapor compression or absorption refrigeration cycle. Evaporative cooling uses the fact that water will absorb a relatively large amount of heat for evaporation.

This report elaborates the market size, market characteristics, and market growth of the Evaporative Air Coolers industry, and breaks down according to the type, application, and consumption area of Evaporative Air Coolers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
