Abstracts

An evaporative Cooler is a device that cools air through the evaporation of water, which can cool air using much less energy than refrigeration. Evaporative cooling differs from typical air conditioning systems which use vapor-compression or absorption refrigeration cycles. In extremely dry climates, evaporative cooling of air has the added benefit of conditioning the air with more moisture for the comfort of building occupants. This report elaborates the market size, market characteristics, and market growth of the Evaporative Cooler industry, and breaks down according to the type, application, and consumption area of Evaporative Cooler. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Evaporative Cooler in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
