## Abstracts

An exoskeleton system is a man-machine system that combines human intelligence and machine power, thereby enabling individuals to gain super strength to walk or move. A powered exoskeleton (also known as power armor, powered armor, powered suit, exoframe, hardsuit or exosuit) is a wearable mobile machine that is powered by a system of electric motors, pneumatics, levers, hydraulics, or a combination of technologies that allow for limb movement with increased strength and endurance. This report elaborates the market size, market characteristics, and market growth of the Exoskeleton System industry, and breaks down according to the type, application, and consumption area of Exoskeleton System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
