Abstracts

Explosion proof equipment does not mean that products will be able to withstand any explosion. Instead, it means that products will contain any source of an explosion within its housings. The term 'explosion proof' also does not indicate, that the product is capable of withstanding an internal explosion without allowing flames or hot gases to escape or trigger an explosion in the surrounding atmosphere. A broader term that can be assigned to these products is explosion protection equipment. This equipment contains in itself various protection principles, like explosion prevention by limiting the operating energy, explosion proof by making the housing robust to withhold any explosion inside itself, and explosion segregation by isolating the source of an explosion inside a protective medium.

This report elaborates the market size, market characteristics, and market growth of the Explosion-Proof Equipment industry, and breaks down according to the type, application, and consumption area of Explosion-Proof Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Explosion-Proof Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
