Abstracts

Explosion Proof Motors are distinguished by high material quality, robust design, high index of IP protection, bearings greased for life, weather and corrosion resistant final overcoat, and high dielectric strength insulation system intended to be feed by static frequency converter. Danger of explosion is always present in mining and many other sectors of industry, such as chemical industry, refineries, on oil rigs, fuel pumps, food processing industry and waste managing companies. A risk of explosion is always present when gases, vapours, mists or dusts mix with air in explosive ratio near ingnition source, so that there is possibility of releasing of so-called minimum ignition energy. Explosion proof equipment is designed in various types of protection, in such a manner that, when properly used, it can prevent explosion if properly applied.

This report elaborates the market size, market characteristics, and market growth of the Explosion Proof Motors industry, and breaks down according to the type, application, and consumption area of Explosion Proof Motors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Explosion Proof Motors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
