## Abstracts

Aluminum extrusion is a technique for converting an aluminum alloy into an object having a defined cross-sectional profile for a wide range of applications. The extrusion process takes advantage of the unique combination of physical properties of aluminum. Its ductility makes it easy to machine and cast, while aluminum has a density and stiffness that is only one-third that of steel, so the resulting product has strength and stability, especially when alloyed with other metals.

This report elaborates the market size, market characteristics, and market growth of the Extruded Aluminium industry, and breaks down according to the type, application, and consumption area of Extruded Aluminium. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Extruded Aluminium in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
