Abstracts

Feldspar is a group of rock minerals that constitute aluminum silicate as the main mineral. Other than aluminum silicate, the other constituents of feldspar include potassium, soda, or lime. Feldspars are crucial components for building stones. In fact, most products that we use in our daily lives are made of feldspar. The alumina and alkali content of feldspar makes it a useful element in various industrial processes. This aluminum content provides durability, hardness, and corrosion resistance to any finished product made from feldspar.

This report elaborates the market size, market characteristics, and market growth of the Feldspar industry, and breaks down according to the type, application, and consumption area of Feldspar. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Feldspar in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
