## **Abstracts**

Fermentation is a metabolic process that produces chemical changes in organic substrates through the action of enzymes. In biochemistry, it is narrowly defined as the extraction of energy from carbohydrates in the absence of oxygen. In the context of food production, it may more broadly refer to any process in which the activity of microorganisms brings about a desirable change to a foodstuff or beverage. The science of fermentation is known as zymology.

This report elaborates the market size, market characteristics, and market growth of the Fermentation Ingredients industry, and breaks down according to the type, application, and consumption area of Fermentation Ingredients. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fermentation Ingredients in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
