Abstracts

Ferric chloride is an industrial scale commodity chemical compound, with the formula FeCl_3 and with iron in the +3 oxidation state. The colour of ferric chloride crystals depends on the viewing angle: by reflected light the crystals appear dark green, but by transmitted light they appear purple-red. Anhydrous ferric chloride is deliquescent, forming hydrated hydrogen chloride mists in moist air. It is rarely observed in its natural form, the mineral molysite, known mainly from some fumaroles.

This report elaborates the market size, market characteristics, and market growth of the Ferric Chloride Powder industry, and breaks down according to the type, application, and consumption area of Ferric Chloride Powder. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Ferric Chloride Powder in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
