Abstracts

Polyferric Sulphate and Ferric Sulphate are iron based coagulants. Coagulants are the chemicals used for the primary treatment of sludge. They destabilise the particles by neutralising the charge on the particle with charges opposite to those of the suspended solids. Once the charges are destabilised, the particles are capable of sticking together. Ferric and polyferric sulphate is mainly used by different industries to treat waste water. These chemicals are used to assist with the removal of colour and turbidity present in untreated, raw water. They do this by forming particles in the form of flocs, which are then removed during downstream clarification or filtration treatment processes. This report elaborates the market size, market characteristics, and market growth of the Ferric Sulphate and Polyferric Sulphate industry, and breaks down according to the type, application, and consumption area of Ferric Sulphate and Polyferric Sulphate. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Ferric Sulphate and Polyferric Sulphate in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
