Abstracts

Field programmable gate array is an integrated circuit designed to be configured by a customer or a designer after manufacturing – hence “field-programmable”. The FPGA configuration is generally specified using a hardware description language (HDL), similar to that used for an application-specific integrated circuit (ASIC) (circuit diagrams were previously used to specify the configuration, as they were for ASICs, but this is increasingly rare).

This report elaborates the market size, market characteristics, and market growth of the Field-Programmable Gate Array (Fpga) industry, and breaks down according to the type, application, and consumption area of Field-Programmable Gate Array (Fpga). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Field-Programmable Gate Array (Fpga) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
