Fire resistant glass is a safety glass primarily used for protection from fire, smoke, and heat. Now a days, usage of glazed screens is increasing for aesthetic purposes and more safety with comfort. But the glazing must be fire resistant complying with the government regulations made for different end uses such as commercial building and offices. Mostly fire resistant glasses are used where building regulations stipulate a specific level of fire resistance and where the people demand natural light and clear visibility such as hospitals, hotels, restaurants, office buildings, computer rooms, schools, stores, shopping centers, airports, industrial buildings, warehouses, and laboratories.

The characteristics of the fire resistant glasses such as clarity that provides good vision without distortion, safety from fire, sound reduction, specific and customized small and large sizes, compatibility with other type of glasses, fire screens and doors, offer multiple advantages over other types of safety glasses.
